Summary of the Event		The speaker highlighted the importance of water in the day to day life. Due to the huge requirement of water for cultivation, interstate disputes arise between the neighboring states in sharing water. The reason is rivers are flowing through different states and Dams were constructed across the rivers in the states, which leads shortage of water in the downstream of the river. Due to this, central government setup a board consisting officials from center and states. The speaker informed the students how the water levels are monitored regularly and distributed to the farmers in the states connected with that river.
